PLANTS NOW PRODUCING
CYANIDE AND TRUCK TIRES

NITROGEN FACTORY MAKES CYANIDE -- Politika, No 13268, 19 Jun 49

Maribor -- Cyanide for disinfecting is now being made at the nitrogen factory in Ruse. The time required to process a charge of ferrochrome there has been reduced from 6 to 2½ hours. A ton of ferrochrome can now be processed there at a saving of 3,700 kilowatt hours as compared with 1939.

The installation of cooling machinery at the factory has increased the production of carbonic acid. A new method of burning sulfur adopted in the sulfur dioxide departments has increased the capacity of the furnaces.

By new analytical methods, chemists in the factory laboratory have succeeded in finding Yugoslav substitutes for chemicals previously imported from abroad.

TRUCK TIRES NOW MADE IN YUGOSLAVIA -- Politika, No 13272, 24 Jun 49

The "Sava" Rubber Factory in Kranj, Slovenia, recently began the production of truck tires, a product always imported in the past. Entirely new equipment and machinery had to be made and installed. A complete machine for making inner tubes was designed by Yugoslav engineers and made exclusively of Yugoslav materials.
